

W8RHZ (Harry L. Steffan) with a pair of Eimac 250T's gets R9 Sigs in 45 states, R9 - in Kent, England

"...I think Eimac Tubes are the best on the market...and when I build my 10 meter rig it certainly will have Eimacs in it."

← *Close-up view showing the Eimac 250th's in full operation. Note plates are running at extreme temperature yet tubes do not "gas out."*

W. A. S. as early as Feb. 1939 and then went out to get R9's from 45 states for the repeat performance. 43 of the 45 states report R9- as well as nine separate R9- confirmed reports from Kent, England. That's the record set up by Harry L. Steffan W8RHZ. Harry says: "There is a certain feeling of confidence when a fellow has Eimacs in his transmitter and it seems that the most consistent stations that I have contacted, all use them."

The "confidence" of which Harry speaks is probably contained in the fact that Eimac tubes consistently turn in superior performance, even under adverse conditions...and...that they are the only tubes on the market which are unconditionally guaranteed against premature failures caused by gas released internally.

Put Eimacs in your transmitter and enjoy this better, safer performance.

A very impressive radio amateur, Harry stood out from the rest on the 75 Meter Band because of his speaking voice, education and big station! W8RHZ is still remembered by many. Aug 1941 QST.
